Better Breathers Clubs, FY2018 Q1

Active Clubs (as of 9/30/17)

Both prevalence and population density impact county-level need for COPD services

40% of Clubs are in high prevalence counties

30% of Clubs are in high density counties

48% of adults 55+ live in a county with a Club

62% of counties with both high prevalence and high density have Clubs

County level COPD prevalence data are not available for the general population; Medicare population data are used here as a proxy. High prevalence is defined as \( \geq 11.2 \) (national average).
